

About

Tokenised digital securities are traditional financial instruments (equity, funds and debt) digitally created on the GRID that benefit from the power of the blockchain. The GRID provides issuers with the opportunity to benefit from unique features that eliminate intermediaries and increases speed of issuance and distribution, while reducing costs and complexities.

Our Solution

The investment cycle of traditional securities is cumbersome, expensive and inefficient. The GRID makes the process of creating and distributing securities easy, cost effective, and efficient, ultimately enabling issuers to issue tailor made tokenised digital securities.

With a simplified security generation and deployment process, issuers will be able to issue their securities within a fast, efficient, compliant environment for allocation and distribution as well as security life-cycle management.

Member Firms

For issuance opportunities on the GRID, potential issuers must seek out a Member Firm. Visit the link below to make contact.

Part of the:

Unique Features

Multiple unique features: including digital security issuance and distribution, interoperability and fractional ownership

Efficient and Compliant

Seamless allocation of tokenised digital securities, eliminating intermediaries and improving speed-to-market in a safe and compliant environment

Trusted Immutable Records

End-to-end immutable trusted record of transactions and Register of Members

The GRID Solution

- Fluidity: Issuers are enabled to seamlessly manage issuance life-cycle activities
- User Friendly: Issuers are enabled to allocate tokenised digital securities with a simple experience
- Efficiency: Legacy intermediaries are removed to enhance the speed of distribution to reduce unnecessary administrative processes and costs
- Immutable: Immutable record of transactions and ownership
- Smart Contracts: Smart contracts enforce rules, and compliance with investor jurisdiction and categorisation, distribution and holding requirements
- New Asset Classes: Opportunity to create innovative products enabling fractionalised ownership of asset classes including, but not limited to, real estate and fine art
